TYBSc(IT), SEMESTER V

INTERNAL PROJECT

for the subject

ENTERPRISE JAVA

Title of the Project:

THE CAFFEINE FIX

Submitted by

Name	Roll no.
KARTHIK CHETTIER	TIT2021011
JACKSON FARRAO	TIT2021015
KHAN SANA	TIT2021027

For the academic year

2020-21

## Topic: JMenu, Jmenubar and Jmenuitem

The **JMenuBar** class is used to display menubar on the window or frame. It may have several menus.

The object of **JMenu** class is a pull down menu component which is displayed from the menu bar. It inherits the JMenuItem class.

The object of **JMenuItem** class adds a simple labeled menu item. The items used in a menu must belong to the JMenuItem or any of its subclass.

### Class Name :-

JMenuBar

### Constructors:

1. **JMenu()** :- It is a pull down menu component which is displayed from the menu bar.
2. **JPanel()** :-Creates a new JPanel with a double buffer and a flow layout.
3. **JLabel(String text)** :- Creates a JLabel instance with the specified text
4. **JTextField()** :- It is a text component that allows the editing of a single line text. It inherits JTextComponent class.
5. **JButton(String text)** :- Creates a button with text.

### Methods:

1. **getText()** : Fetches the text contained within the given portion of the document.
2. **getConnection()** : The **getConnection(String url)** method of Java DriverManager class attempts to establish a connection to the database by using the given database URL.
3. **setVisible(boolean b)** : Shows or hides this component depending on the value of parameter b.

4. **getLogger()** : The **getLogger()** method of a Logger class used find or create a logger. If there is a logger exists with the passed name then the method will return that logger else method will create a new logger with that name and return it.
5. **setText()** : This method takes the text to be set as a parameter and sets the text of this StringCharacterIterator at that text.
