Abstract

Going to gyms and visiting a clinic are considered to be two different things or two opposite ends of a thread. 360FIT brings everything under one roof. Earlier it was difficult for people to do such things like exercising, having a therapy session or anything else. It was also expensive also at the same time. We also have training session for the upcoming trainers, helping them to mark themselves in the fitness industry. From Calisthenics to Ayurveda are also included in the unique category in our bracket of versatility. It is also not that expensive as we have all the basic fees ducted by us itself. We also train aspiring fitness trainers who wish to be part of this fitness revolution. The website also allows people to join our franchise and promoting it. The existing systems were good and useful but, also complex at the same time. Either they were focusing on the body building aspect of fitness or medical fitness of a person. This is not the case with 360 FIT, here we focus on overall health plans of a person.

ACKNOWLEDGEMENT

First of all, we thank my friends for encouraging us to complete the project work successfully.

We express our sincere gratitude to our project guide Mrs. K. Sarojini, SIES College of Arts, Science & Commerce (Autonomous), Sion, for the inspiration and valuable suggestions during the course of project work.

We also thank our friends and family members for their support and encouragement throughout the course of my project.

DECLARATION

I hereby declare that the project entitled, “**Health Care System**” has not been in any case duplicated to submit to any other university for the award of any degree. To the best of my knowledge other than me, no one has submitted to any other university.

The project is done in partial fulfillment of the requirements for the award of degree of **BACHELOR OF SCIENCE (INFORMATION TECHNOLOGY)** to be submitted as final semester project as part of our curriculum.

Name and Signature of the Student

Jackson Ferrao

Chapter 1: Introduction

1.1 Background

360 FIT is fitness website which not only focuses on physical health of a person but also internal health like giving psychiatric, sleep, diet plans, etc.. Since people are avoiding health issues and giving more importance to life success such a website needed a place on the internet. Consumers can directly log-in to the page by paying a specific amount. Once they have done this now they can access as many programs as they want. This program includes gym training, Doctor's consultation, nutritionist's consultation, etc. Customers will have to pay for each functionality they would like to access. Here we are speaking about the customers but, people who use the website for joining 360 FIT as an aspiring fitness trainers are also considered as customers. We also train aspiring fitness trainers who wish to be part of this fitness revolution. The website also allows people to join our franchise and promoting it. The existing systems were good and useful but, also complex at the same time. Either they were focusing on the body building aspect of fitness or medical fitness of a person. This is not the case with 360 FIT, here we focus on overall health plans of a person.

1.2 Objective

- A website that will provide help for all fitness related queries.
- Provides education for fitness trainers.
- Allows people to grow business but, as per the franchise laws.
- To provide online classes for fitness training.
- Doctors available for 24hrs help in case of emergency.
- Also focuses on Ayurveda in order to promote Indian knowledge.
- The foremost feature of the proposed system is giving access the users for online training, consultation, etc.
- Lists the available consultation and therapy programs.
- Ayurveda can also be consulted.
- Fitness trainers are also educated with certification.
- Proper schedule for appointments

1.3 Purpose, Scope and Applicability

1.3.1 Purpose

This system will guide people towards healthy life style. Since people are ignoring it due to busy co-operate living or hectic schedule. This website has been made in consideration with other popular websites like cure.fit, nitro, etc. But this website has a fusion of them not completely dependent on either of their modules and features.

1.3.2 Scope

It stores all the appointments and schedule of the user. This stored data of schedule will be displayed in the form of table for user and the granted admin .Can not only consult a doctor but, also a ayurvedic expert. Provides an option to join the franchise, to do so the user

will have to fill a form showing his network. If the network matches the requirements then they can promote the business of the website under specific laws. There are also online classes conducted via zoom meetings. The zoom links will be displayed in the schedule. Doctors consultation will also be done similarly.

1.3.3 Applicability

The proposed system is willing to mainly target the youth, senior citizens and people who don't have much time to be fit.

Chapter 2: Survey of Technologies

2.1 Front-End

1. Java: -

- Simple: Java is very easy to learn, and its syntax is simple, clean and easy to understand. According to Sun, Java language is a simple programming language
- Object – oriented: Java is an object-oriented programming language. Everything in Java is an object. Object-oriented means we organize our software as a combination of different types of objects that incorporates both data and behaviour.
- Platform – Independent: Java is platform independent because it is different from other languages like C, C++, etc. which are compiled into platform specific machines while Java is a write once, run anywhere language. A platform is the hardware or software environment in which a program runs.
- Architecture – neutral: Java is architecture neutral because there are no implementation dependent features, for example, the size of primitive types is fixed.
- Dynamic: Java is a dynamic language. It supports dynamic loading of classes. It means classes are loaded on demand. It also supports functions from its native languages, i.e., C and C++.

2. HTML (Hyper Text Mark Up Language): -

- It is the language which can be easily understood and can be modified.

- Effective presentations can be made with the HTML with the help of its all formatting tags.
- It provides the more flexible way to design web pages along with the text
- Links can also be added to the web pages so it helps the readers to browse the information of their interest.
- Graphics, videos and sounds can also be added to the web pages which give an extra attractive look to your web pages.

Why we choose Bootstrap?

Bootstrap:

- Easy to use: Anybody with just basic knowledge of HTML and CSS can start using Bootstrap.
- Responsive features: Bootstrap's responsive CSS adjusts to phones, tablets, and desktops.
- Mobile-Friendly: Mobile-first approach: In Bootstrap 3, mobile-first styles are part of the core framework.
- Simple Integration: Bootstrap can be simply integrated along with distinct other platforms and frameworks, on existing sites and new ones too and one more thing you can also utilize particular elements of Bootstrap along with your current CSS.
- Customizable Bootstrap: The Bootstrap can be customized as per the designs of your project.

2.2 Back-End/DBMS

1. IIS server:

- A Microsoft product, IIS is a server that offers all the features such as
- Since it's not an open source, adding personal modules as well as modifying becomes a bit difficult.
- It supports all the platforms that run Windows operating system. Additionally, you also get good customer support, if there is any issue.
- This module ensures the security and manageability. Due to this feature you can now use greylisting and access patterns enabling you to smoothly and dynamically manage access for number of sites to the internet and FTP servers.
- Allows you to build more interactive and powerful web applications because of a continuous and bidirectional communication between the web browser and the web server. Web Sockets require Windows Server 2012 or higher versions.

2. Node.js server:

- Node.js is basically a server-side JavaScript environment that is used for network applications such as web servers.
- It is mainly a cross-platform runtime environment for building network applications.
- Node.js also helps in understanding the difference in web development stacks.
- Build scalable real-time applications and infrastructure with Node.js, writing code using familiar JavaScript conventions.
- Create applications that can handle thousands of users with Node's low-latency, high-volume API. Rapidly build your next big idea with Node's rich ecosystem that grows with you.

Why we choose SQL?

- Can contain SQL Procedural Language statements and features which support the implementation of control-flow logic around traditional static and dynamic SQL statements.
- Support nested functions calls to other SQL functions or functions implemented in other languages.
- Reside in the database and are automatically backed up and restored as part of backup and restore operations.
- Can be invoked wherever expressions in an SQL statement are supported.
- Are easy to implement, because they use a simple high-level, strongly typed language

2.3 Scripting Language

1. JavaScript:

- JavaScript is very useful while using forms. It has the capability to validate user input for errors and also saves time. If the user leaves a required field empty or the information is incorrect, JavaScript checks for them before sending the data over to the server.
- Since JavaScript is a client-side technology, it can perform basic calculations on the browser. The browser does not need to ask server time for every task. This is especially helpful when a user needs to perform these calculations repeatedly.
- JavaScript provides greater control to the browser rather than being completely dependent on the web servers. JavaScript provides various browsers with additional functionalities that help reduce server load and network traffic.
- Unlike other programming languages, JavaScript has built-in functions to determine the date and time.
- JavaScript has very handy features to dynamically generate HTML content for the web. It allows us to add text, links, images, tables, etc after an event occurrence.

2. VBscript :

- VBScript is a lightweight scripting language, which has a lightning fast interpreter.
- VBScript, for the most part, is case insensitive. It has a very simple syntax, easy to learn and to implement.
- Unlike C++ or Java, VBScript is an object-based scripting language and NOT an Object-Oriented Programming language.
- It uses Component Object Model (COM) in order to access the elements of the environment in which it is executing.
- Successful execution of VBScript can happen only if it is executed in Host Environment such as Internet Explorer (IE), Internet Information Services (IIS) and Windows Scripting Host (WSH).

2.4 Software and Broad Areas of Application

Table 2.1 : Software and Broad Areas of Application

FRONT-END / GUI Tools	Bootstrap
DBMS/BACK-END	Php, SQL
SCRIPTING LANGUAGES	JavaScript

Chapter 3: Requirement and Analysis

3.1 Problem Definition:-

- **False Results:**

If you search terms like “nausea,” “fatigue,” “abdominal pain,” and “sore joints,” you’ll find a wide variety of possible diagnoses, from minor issues to life threatening conditions. When you use an online symptom checker, you might struggle ruling out these differential diagnoses —leading to increased stress, fear, and anxiety. Unfortunately, there is a well-recognized connection between anxiety and pain. Your increased anxiety might worsen your pain and other symptoms. This is due to lack of specialised doctors or lack of research done by other websites.

- **Expensive:**

They charge a lot of money. There is not subscription as such which makes it much more cost much more high. Users have to pay money for each consultation’s check up separately. Healthcare costs of these websites have been rising for past few years and are expected to keep increasing.

- **Lengthy Process:**

The process of administering the symptoms is a lengthy one. It can take several weeks to complete the cycle by evaluating the results, then collecting and analyzing the them, to sharing reports and acting on the results obtained. As doctors do not receive results quickly, valuable time is lost in responding to patient concerned and implementing possible changes.

- **Limited Flexibility:**

The use of data generated after the consultation i.e. results aren't very flexible and needs to be acted on. This can take a lot of time and is often regarded as needless, neglecting the fact that it can provide some important statistic.

3.2 Requirement Specification:

4 Secure login:

There should be a strong authentication and verification of the data entered in every field of the login form. There should not be any chance for the intruder to access the database by using SQL Injection in login form or some other technique. SQL injection is a code injection technique that might destroy your database. SQL injection is one of the most common web hacking techniques.

5 Web Design:

Several factors such as consistency, colours, typography, imagery, simplicity and functionality all contribute to good website design. When designing a website there are many key factors that will contribute to how it is perceived. A well designed website can help build trust and guide visitors to take action.

6 Dynamic:

Users need not use any other application because it has all the required features. The system which is to be developed should be easy access to anyone who has basic knowledge of using a computer.

3.3 Planning & Scheduling:

PERT Chart:

A PERT chart is a project management tool that provides a graphical representation of a project's timeline. The Program Evaluation Review Technique (PERT) breaks down the individual tasks of a project for analysis. PERT charts are considered preferable to Gantt charts because they identify task dependencies.

PERT charts help project managers get a handle on complex projects. They're useful because they provide an estimation of how much time you'll need to schedule the project and what resources will be required. The nature of the PERT chart and its breakdown structure

helps to visualize the complexity of a project and the dependencies between each step in the process.

PERT Diagram could be represented in two ways:

- 1) Activity on Arrow
- 2) Activity on Node

In Activity on Arrow, the arrows represent activity whereas in Activity on Node, the nodes represent activities. In the project, Activity on Node is used to draw the PERT Diagram. Here we are going to show 2 charts: one showing the schedule of the documentation (A) and the other shows the schedule of the project starting with planning to the actual implementation (B).

(A): PERT Diagram for Documentation

Synopsis – A

Chapter 1 – B

Chapter 2 – C

Chapter 3 – D

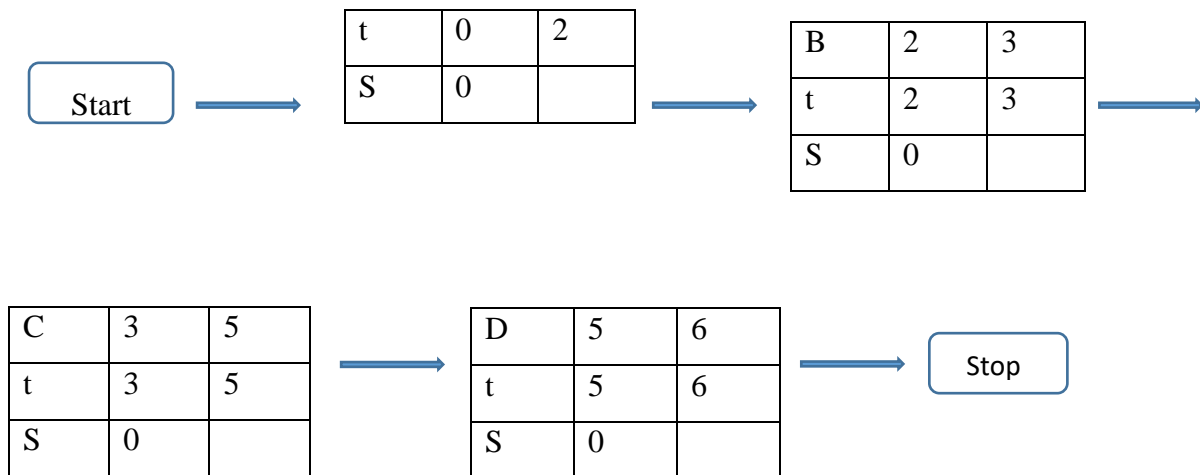

Table 3.1 : Pert Chart (Documentation)

Activity	Precedence	Duration
A	-	2 Weeks
B	A	1 Week
C	B	2 Weeks
D	C	1 Week

Project Network:

Start → A → B → C → D → Stop

A	0	2
---	---	---

Slack = 0 for all activities

Therefore, critical path = A-B-C-D

The Project Documentation completion duration is 6weeks.

(B): PERT Diagram for Project

Planning – I

Requirements – II

Designing – III

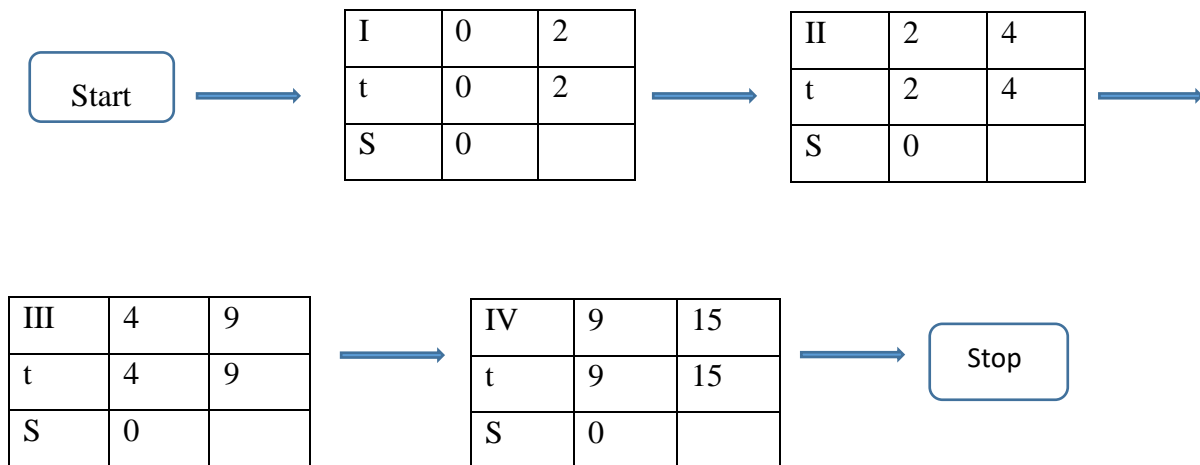

Documentation – IV

Table 3.2 : Pert Chart (Project)

Activity	Precedence	Duration
I	-	2 Weeks
II	I	2 Week
III	II	5 Weeks
IV	III	6 Weeks

Project Network:

Start → I → II → III → IV → Stop

Slack = 0 for all activities

Therefore, critical path = I-II-III-IV

The Project completion duration is 15weeks.

Gantt Chart :

A Gantt chart, commonly used in project management, is one of the most popular and useful ways of showing activities (tasks or events) displayed against time. On the left of the chart is a list of the activities and along the top is a suitable time scale. Each activity is represented by a bar; the position and length of the bar reflects the start date, duration and end date of the activity. Below Gantt chart shows us the schedule of the project. It is a diagram representing the time taken for each task and can be easily prepared using Microsoft Word and Excel as well as some online applications. These types of charts help in the scheduling of the project after proper planning of the project is done. This scheduling helps to find out the estimated and the actual time period of each stage of the project. Here we are going to see 2 Gantt charts: one showing the schedule of the documentation (A) and the other shows the schedule of the project starting with planning to the actual implementation (B).

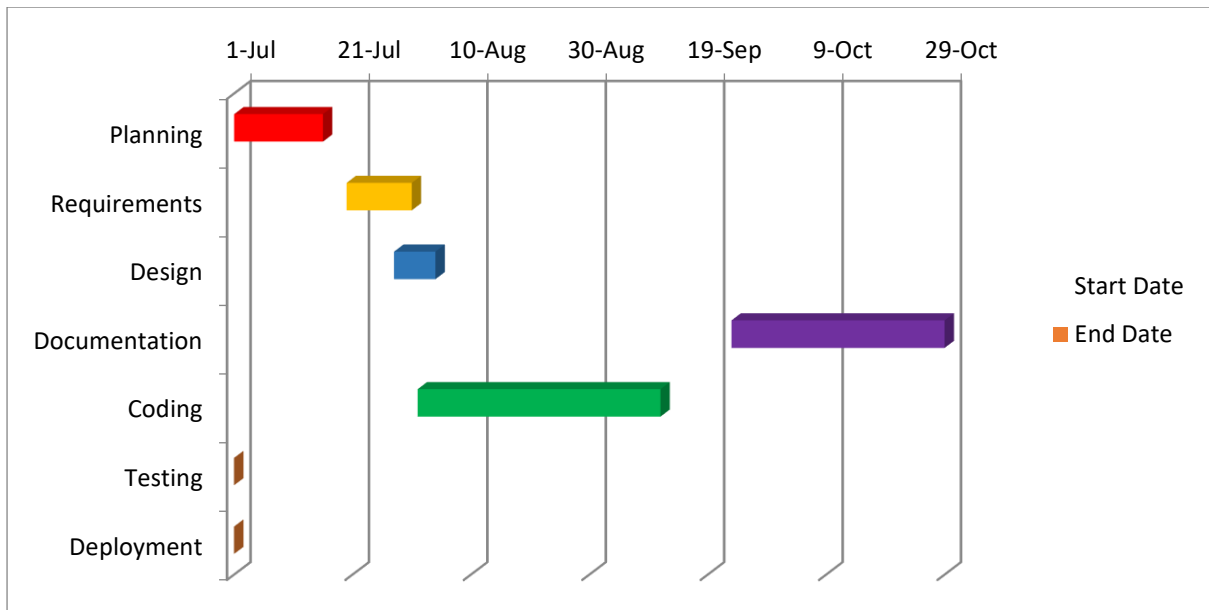

Figure 3.1 Gantt Chart (Project)

Figure 3.2 Gantt Chart (Documentation)

3.4 Software and Hardware Technologies:

Software Requirements:

- Windows Operating System
- Visual Studio Code
- Bootstrap toolkit library
- Web browser
- Apache web server Software
- MYSQL

Hardware Requirements:

- Laptop/PC
- LAN

3.5 Conceptual Models

Use Case Diagram:

Chapter 5 Implementation and Testing

5.1 Implementation Approaches

While building the website two approaches were taken into consideration, one the user's approach and the other one is the admins approach. Both the views are equally important as they are dependent on each other for confirmation, payment and other purposes.

A normal user can schedule his gym plan, consult a doctor, get trained to become a trainer and also shop products. There are many forms in the website through which the admin comes to know the user's needs and sends him confirmation of details received or sends him a link.

The admin can have a look at all the activities going through the whole website. Admin is the one responsible for getting in touch with the users. Doctors and trainers are also admins but they can only check for their work in the admin section.

5.2 Coding Details and Code Efficiency

5.2.1 Code Efficiency

Cocoma (Constructive Cost Model) is a regression model based on LOC, i.e. **number of Lines of Code**. It is a procedural cost estimate model for software projects and often used as a process of reliably predicting the various parameters associated with making a project such as size, effort, cost, time and quality. It was proposed by Barry Boehm in 1970 and is based on the study of 63 projects, which make it one of the best-documented models.

Different models of Cocoma have been proposed to predict the cost estimation at different levels, based on the amount of accuracy and correctness required. All of these models can be applied to a variety of projects, whose characteristics determine the value of constant to be used in subsequent calculations.

- Organic
- Semi detached
- Embedded

• Mode	“A” variable	“B” variable	“C” variable	“D” variable	KLOC
Semi-Detached	3	1.12	2.5	0.35	7.8
Effort (person-months)		Duration (months)		Staffing	
29.941		8.215		3.644	

Table 5.1 COCOMO Model

5.3 Testing Approach

5.3.1 Unit Testing

Unit Testing is a type of software testing where individual units or components of a software are tested. The purpose is to validate that each unit of the software code performs as expected. Unit Testing is done during the development (coding phase) of an application by the developers. Unit Tests isolate a section of code and verify its correctness. A unit may be an individual function, method, procedure, module, or object.

In SDLC, STLC, V Model, Unit testing is first level of testing done before integration testing. Unit testing is a WhiteBox testing technique that is usually performed by the developer. Though, in a practical world due to time crunch or reluctance of developers to tests, QA engineers also do unit testing.

Unit Testing is important because software developers sometimes try saving time doing minimal unit testing and this is myth because inappropriate unit testing leads to high cost Defect fixing during System Testing, Integration Testing and even Beta Testing after application is built. If proper unit testing is done in early development, then it saves time and money in the end.

Payment Module :

```
<?php
session_start();

$ch = curl_init();

curl_setopt($ch, CURLOPT_URL, 'https://test.instamojo.com/api/1.1/payment-requests/');
curl_setopt($ch, CURLOPT_HEADER, FALSE);
curl_setopt($ch, CURLOPT_RETURNTRANSFER, TRUE);
curl_setopt($ch, CURLOPT_FOLLOWLOCATION, TRUE);
curl_setopt($ch, CURLOPT_HTTPHEADER,
    array("X-Api-Key:test_df7c4aaa6178a319ad3edc0abea",
        "X-Auth-Token:test_8d0538039a5998028bd60d8286a"));
```

```

$payload = Array(
    'purpose' => $_SESSION['p_page'],
    'amount' => $_SESSION['p_amount'],
    'phone' => $_SESSION['p_phone'],
    'buyer_name' => $_SESSION['p_name'],
    'redirect_url' => 'http://127.0.0.1/360_fit/redirect.php',
    'send_email' => true,
    'webhook' => 'http://www.example.com/webhook/',
    'send_sms' => true,
    'email' => $_SESSION['p_email'],
    'allow_repeated_payments' => false
);
curl_setopt($ch, CURLOPT_POST, true);
curl_setopt($ch, CURLOPT_POSTFIELDS, http_build_query($payload));
$response = curl_exec($ch);
curl_close($ch);
$response=json_decode($response);

$_SESSION['TID']=$response->payment_request->id;
$pay_id = $response->payment_request->id;
$conn = mysqli_connect('localhost','root','','360_fit') or die('unable to connect');
$id=$_SESSION['s_id'];
$db = $_SESSION['p_page'];
$email=$_SESSION["email"];

$result1 = mysqli_query($conn,"INSERT INTO `payment_log`(`email`,`page`,`pay_id`) VALUES ('$email','$db','$pay_id')");

    $result = mysqli_query($conn, "UPDATE `db` SET `pay_id`= '$pay_id' WHERE id = '$id'");
    if ($result) {
        header('location: ' . $response->payment_request->longurl);
        die();
    } else {
        header('location:dr_online_form.php');
        die();
    }
die();
?>

```

Here we have done unit testing on the Payment Module.

Now, we will start performing the unit testing on the different components such as

1. Card Number text field
2. Expiry Date text field
3. CVV text field
4. Pay button

For the Card Number text field component :

Name	Description
4242 4242 4242 4242	Accept
Any other number	Error Message – Invalid
Blank	Error Message – Required

For the Expiry Date text field component :

Name	Description
Anything Date > Today's Date	Accept
Any Date < Today's Date	Error Message – Invalid
Wrong Date format	Error Message – Invalid
Blank	Error Message – Required

For the CVV text field component :

Name	Description
111	Accept
Any other number	Error Message – Invalid
Blank	Error Message – Required

For the Login button component :

- Enter valid Card Number
- Enter valid Expiry Date
- Enter valid CVV
- Click on the Pay button→ Payment Successful Mail Received

5.3.2 Integrated Testing

Integration Testing is defined as a type of testing where software modules are integrated logically and tested as a group. A typical software project consists of multiple software modules, coded by different programmers. The purpose of this level of testing is to expose defects in the interaction between these software modules when they are integrated. Integration Testing focuses on checking data communication amongst these modules. Hence it is also termed as 'I & T' (Integration and Testing), 'String Testing' and sometimes 'Thread Testing'.

A Module, in general, is designed by an individual software developer whose understanding and programming logic may differ from other programmers. Integration Testing becomes necessary to verify the software modules work in unity

At the time of module development, there are wide chances of change in requirements by the clients. These new requirements may not be unit tested and hence system integration Testing becomes necessary

Table 5.2 Test Scenario 1

5.3.3 Beta Testing

Beta testing is a type of User Acceptance Testing among the most crucial testing, which performed before the release of the software. Beta Testing is a type of Field Test. This testing performs at the end of the software testing life cycle. This type of testing can be considered as external user acceptance testing. It is a type of salient testing. Real users perform this testing. This testing executed after the alpha testing. In this the new version, beta testing is released to a limited audience to check the accessibility, usability, and functionality, and more. Beta testing is the last phase of the testing, which is carried out at the client's or customer's site.

5.4 Modifications and Improvements

Initially the user was unable to start typing as there were some issues in the CSS of the code and it could be a bad experience for the user because every time the user would have to start searching for the perfect place to give input over the textfield.

The above mentioned modifications were implemented in order to improve the experience of the user.

5.5 Test Cases

1.Login Test Scenario :-

Test Case ID	Test Case Description	Test Steps	Test Data	Expected Result	Actual Result	Status

Table 5.12 Test Scenario 11

Chapter 6: Results and Discussions

6.1 Test Reports

1. Sign-up Form

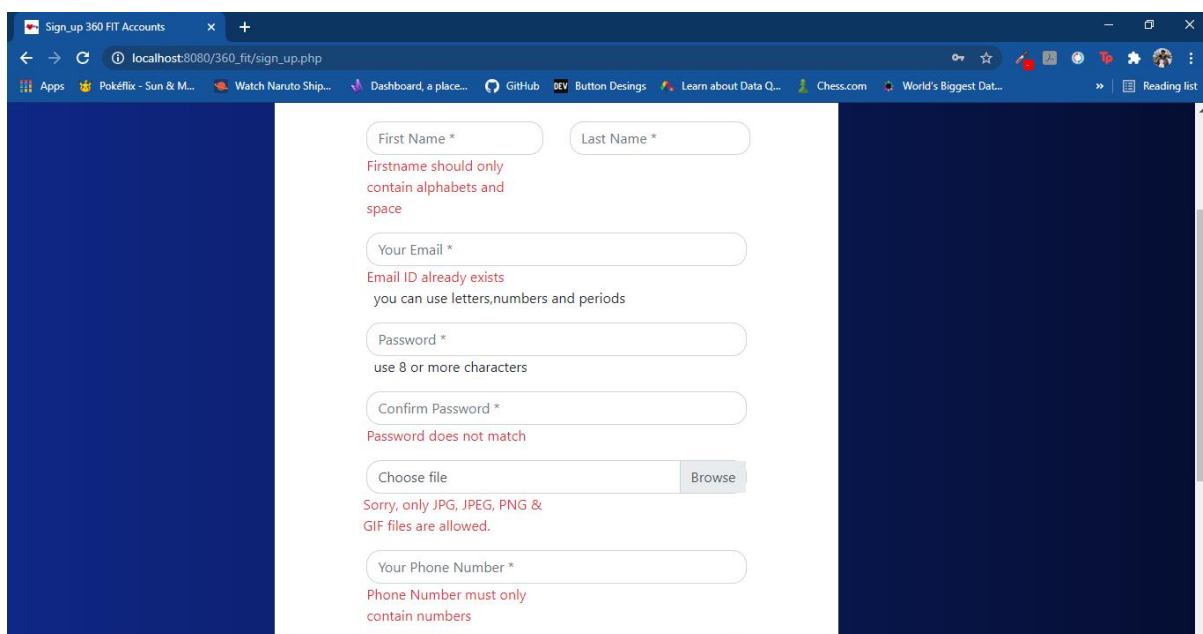

The screenshot shows a web browser window with the address bar displaying 'localhost:8080/360_fit/sign_up.php'. The browser's tab is labeled 'Sign_up 360 FIT Accounts'. The page content is a sign-up form with the following fields and elements:

- First Name: 'Harry' (highlighted in blue)
- Last Name: 'Potter' (highlighted in blue)
- Email: 'harrypottergmail.com' (highlighted in blue)
- Password: A masked field with 8 dots (highlighted in blue)
- Confirm Password: A masked field with 8 dots (highlighted in blue)
- File Upload: A 'Choose file' button and a 'Browse' button (highlighted in blue)
- Phone Number: '6846864783' (highlighted in blue)
- Address: 'Mumbai, 400604' (highlighted in blue)
- Sign-up Button: An orange button labeled 'Sign-up' (highlighted in blue)
- OR: Text centered below the Sign-up button
- Already have an Account?: Text centered below the OR text

A validation error message is displayed in a yellow box with a red exclamation mark icon, pointing to the email field. The message reads: 'Please include an '@' in the email address. 'harrypottergmail.com' is missing an '@'.'

Figure 6.1

This popup error reminds the user to put a valid Email id.

The screenshot shows the same web browser window as Figure 6.1, but with multiple validation errors displayed in red text below the input fields:

- First Name *: 'Firstname should only contain alphabets and space'
- Your Email *: 'Email ID already exists you can use letters,numbers and periods'
- Password *: 'use 8 or more characters'
- Confirm Password *: 'Password does not match'
- File Upload: 'Sorry, only JPG, JPEG, PNG & GIF files are allowed.'
- Your Phone Number *: 'Phone Number must only contain numbers'

Figure 6.2

These are various validations applied to the sign-up form. The first one is due to the entering number in the First Name. The email entered already exists. The password and the confirm password were different. File error occurred, because no files were chosen. In case alphabets are entered in the Phone Number text box this error is displayed.

2. Login Form

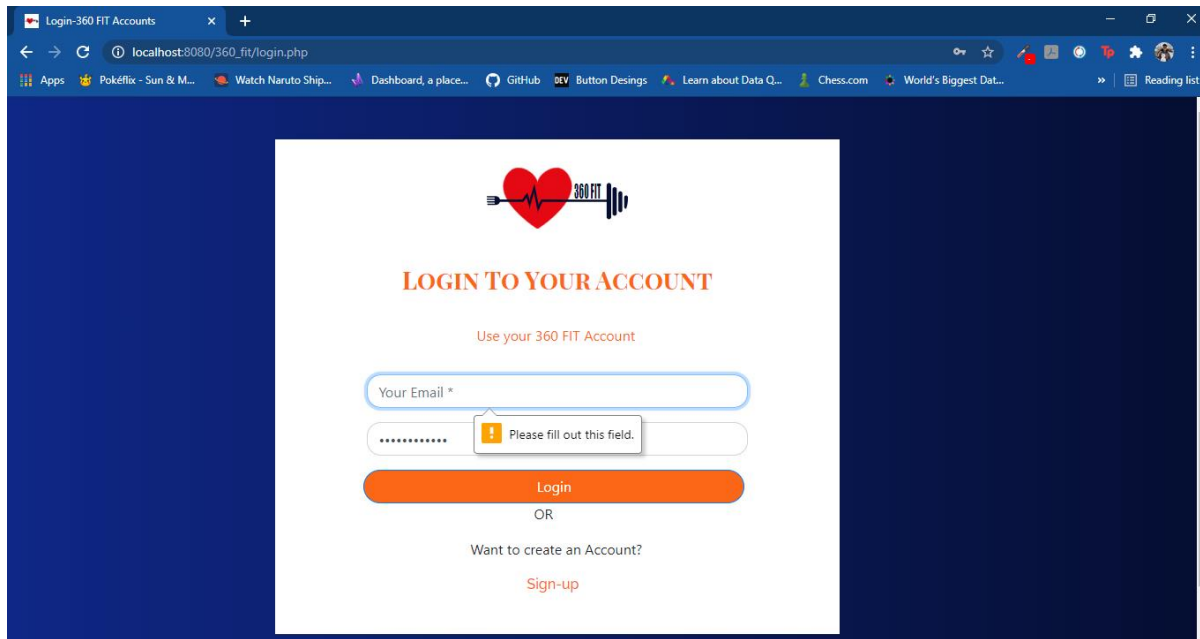

Figure 6.3

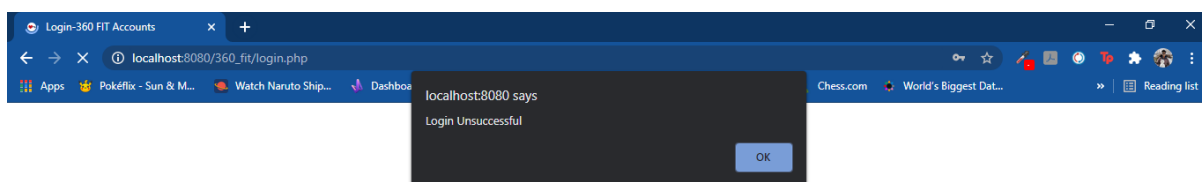

Figure 6.4

This error was displayed because the email and the password entered were invalid.

3. Trainee Form

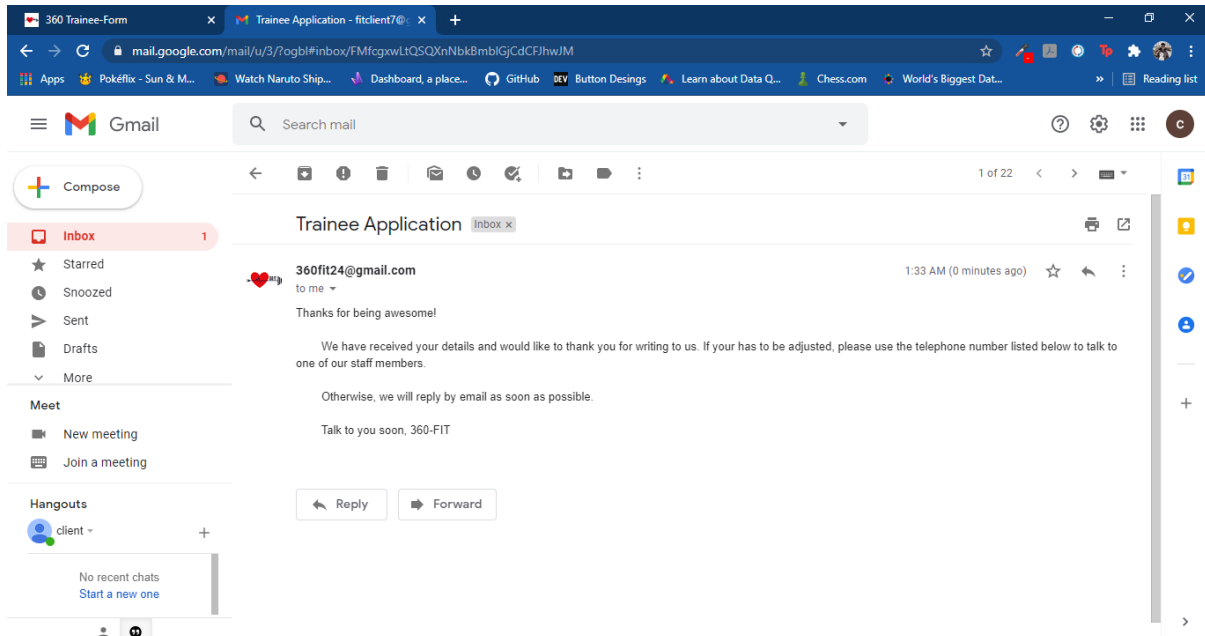

Figure 6.5

This mail will be sent to users who fill the Trainee Form.

6.2 User Documentation

360-FIT is for the fitness freaks as well as for people who are figuring out how to start a journey in fitness. People searching for online consultation can also find their way on the website by filling different consultation forms. There is also a E-commerce section called 360-Shop, which has all fitness related products.

The major functions of this system are:

- Login Page:

Users who already have an account can enter their email and password to go into the home page.

- Sign-up:

Users with no registered email will have to sign-up here and register themselves. Each and every information asked here is crucial.

- Home page :

The home page is a place where users can find all the sections for all activities offered by 360-FIT. On the top there a navbar which will locate the user to Franchise Form for the business aspect, to the care section with gym plan and consultation form, shop to buy products and logout tab. Below the navbar there is 'Become a Trainer' section which will redirect to the trainee form. Other parts of this page have the small details of 360-FIT.

- Trainee Form:

Users wishing to become a trainer can fill this form and our team will get in contact to them as soon as possible. So, entering a correct email is very important.

- Franchise Form:

Users liking to expand their business through can send in their details by filling this form. Here too mail can be expected as early as possible by the team.

- Consultation Forms / Care:

In case of any emergency or any kind of health consultation needed then user can fill in this form. There are different types of forms like Doctor consultation, Therapy, Nutrition and Ayurveda.

- Gym Care:

Users in search of fitness can find perfect forms for the in this section. We provide all kinds of physical trainings online.

- 360-Shop:

All fitness related can be found in this shop. Users just have to view their desired product and place the order.

CHAPTER 7: CONCLUSION

7.1 Conclusion

7.1.1 Significance of the System

- All kind of health related solutions are found here.
- No limitations on number of consultations.
- The website is simple to use and understand, so that people of almost all age groups can use it.
- Users can view their plan too.
- Approachable consultants.
- Secure Payment gateway.

7.2 Limitations of the system

- Processing speed of mail and payment depends on the computer configuration.
- Limited number of products in the shop.
- The user is not notified if the order is delivered.
- Users cannot track their health.
- User cannot track their order.

7.3 Future Scope of the Project

- Uses might be notified about the product delivery..
- The admin part might be handled by multiple users and also a single admin in-case of emergency.
- Offers might also be introduced.
- Shop size can be increased in the future.
- Options might be given to user to track health and delivery.
